

## System Requirements

BLUEPAGE is a web application programmed in PHP. BLUEPAGE is installed on a webserver alongside PHP, and you work with it through a web browser, like Internet Explorer or Mozilla Firefox.

To run BLUEPAGE successfully there are some requirements for both server and client (user) that must be met.

### Webserver:

- Operating System: Unix (eg Linux), Windows or Mac
- Webserver: Apache, IIS
- Middleware: PHP>4.2 or PHP5
- Save-mode: off
- Database: MySQL
- Hardware: A normal webserver setup will do, with some modern CPU and at least 256 MB Ram. As with all database-driven applications, more RAM is advisable though.
- ImageMagick
- .htaccess-Support

### Optional:

- GDlib/Freetype (compiled with PHP)
- zlib (compiled with PHP)
- Apache with mod\_rewrite to use rewriting URLs

### Client (user):

- Recommended: • Browser on any OS on a graphic user interface (for example: Windows, Mac OS X or Unix with X11)
- Common graphic Browser: Microsofts Internet Explorer, Mozilla-Projekt (Mozilla Application Suite, Firefox and Camino), Opera Software ASA (Opera), KDE (Konqueror) and Apple (Safari)
